

COOPERATIVE ECONOMIC INSECT SURVEY REPORT
Glenn A. Salsbury, Survey Entomologist

Report 4, Volume 57
April 15, 2009

HOLLYHOCK WEEVIL: Adults are now active. The damage caused by this insect occurs when the adults feed on the leaf buds causing the leaves to tatter as they expand.

MOSQUITO LARVAE: First larvae were observed last week.

ASIATIC OAK WEEVIL: First adults were trapped this week.

APHIDS (various species): The most common insect found in greenhouses and other ornamental plants this past week.

GREENBUGS: None were found in wheat surveyed this past week.

Contributors to this report: Salsbury, Sanders, Buhler, Copeland, Clarkson
